- Mitigate spoofing
- Enhance deliverability
- Move to Reject mode in a more efficient manner

DMARC Dashboard ①

Phishing Simulations ②
- 91% of all Cyber Attacks start with Phishing – Gartner
- Post-delivery security of emails

- Helps in finding vulnerabilities which can be seen from outside to any hacker in the world.
- Security Risk Rating

Attack Surface Management ③

Identify Business Critical Bugs ④
- Focuses on Business Impact
- 32 Hall of Fame hackers
- Pay only if vulnerabilities found

Cyber Services
4 services to boost Cyber Immunity

Attack Surface Management

CXO Report - This is a management level report which provides a high-level overview of the key risk factors divided into 7 broad categories

- SSL Misconfiguration
- Vulnerable Network Services
- Web Application with Vulnerable Products
- Missing Security Headers
- DNS Health
- Information Leak
- IP Reputation

DTR Report - This report provides an in-depth breakdown of the vulnerabilities discovered across the public-facing assets of the organization along with their description and patch recommendations.

Attack Surface Management
Cyber Immunity Discovery

This is a 7-day activity where the BugsBounty.com team of 32 hackers will try and penetrate every infrastructure component that you have and tell you where the gaps are in Applications, Code, Infrastructure, Network, Web, Social and mobility.

3 types of reports will be shared with you and on-going patching will keep on being advised.

The biggest selling point of this is that if we do not find any business-critical vulnerability, you don't pay us.

The hit ratio of this team is 100%!

Identify Business Critical Bugs

Business Critical Bugs

Identify where you can be breached by getting breached
